

1.4. AI Event Quality & Verification Scanner

Develop an AI-based event verification system.

The system should detect:

- Duplicate events
- Incorrect information
- Suspicious listings
- Spam content
- Low-quality submissions

Generate:

- Event Quality Score
- Trust Score
- Verification Recommendation

Development Requirements:

Expected Deliverables:

Participants should submit:

- Working Web/Mobile Prototype
- Source Code
- UI/UX Prototype (Figma)
- Database Design
- AI Model Approach
- System Architecture Diagram
- Demo Video
- Impact Explanation

Development Requirements:

UI/UX Design: Figma/Adobe XD

For:

- User Journey design
- User Experience
- Wireframes
- Prototypes
- Responsive Interfaces
- UI Screens

Development Requirements:

Frontend: Next.js

For:

- Web application
- Student dashboard
- Event discovery interface
- AI recommendation display

Backend: Node.js

For:

- API development
- User management
- Event processing
- AI integration services

Development Requirements:

Database: PostgreSQL

For storing:

- User profiles
- Events
- Interactions
- Recommendations
- Analytics data

Mobile Application: Flutter - Cross Platform

For:

- Android/iOS application
- Student mobile experience
- Push notifications
- AI-powered features
